Version 34

FastServers.Net has been extremely busy over the last six months in preparation for a number of new and exciting changes taking place within the organization. These changes will improve and expand FastServers.Net's products and services in order to provide an enhanced experience for every FastServers.Net customer.

Improvements

First let's start with the improvements. The FastServers.Net dedicated server backup service has been reinvented! We have partnered with an industry leader in remote backup services to bring you full 7, 14, and 28 day backups on both Linux and Windows platforms. Our new partner, Arsenal Digital (www.arsenaldigital.com), deployed an enterprise level backup architecture enabling FastServers.Net to utilize their remote backup systems through a VLAN (Virtual Local Area Network).

Over the last 90 days we have been working hard to move current customers away from NAS based backups to the new managed backup service. FastServers.Net places high priority on protecting our data and has made a significant investment in providing a robust and secure environment for this to take place.

To learn more about the new FastServers.Net Managed Backup Service, please contact us today by calling 1-866-820-7215 or send an email to sales@fastservers.net.

Recent Events

On July 17, 18, and 19, FastServers.Net attended HostingCon 2006 in Las Vegas, NV. As a platinum sponsor at the event, FastServers.Net hosted a live game show. One lucky winner received a brand new Dell 50" plasma television! We also hosted an exclusive after party at Pure, the hottest club in Las Vegas, for all our friends, guests, and customers who attended the event. For those of you interested in seeing the game show in action, visit our game show website at <http://gameshow.fastservers.net>.

Aside from the cool game show and the awesome after party, FastServers.net experienced some incredible moments at HostingCon 2006. The following are only a few of the exciting times we experienced:

(1) Ian Andrusyk, CEO of FastServers.Net, was part of a panel of CEOs that discussed "Lessons from the Trenches - What Works NOW" with other web hosting company executives. Ian also introduced 1&1's CEO, Andreas Gauger, as they discussed the global deployment of SWSOft's leading control panel software, Plesk, and its impact on the hosting industry.

(2) We all love awards, especially after putting a lot of hard work into something we are extremely passionate about. Yes, we came home with a couple of awards given to us by our media sponsor, TopHosts (www.tophosts.com). The two awards FastServers.Net received were directly related to our booth at the event. One for "Best of Show" and one for "Most Interactive." We appreciate these awards as it demonstrates our hard work and dedication for everything we set out to do for our customers, partners, and those looking for a new dedicated server solution company.

(3) The FastServers.Net after party at Pure was a tremendous success! There were over 300+ attendees at the party! For those of you who missed the after party, it was an absolute blast as new friendships were established, new business partnerships were born, and many memories were made that will last a lifetime.

Okay, we know you want to see pictures, right? That said, HostingCon 2006 gave us an opportunity to take over 300+ digital photos of the FastServers.Net booth, game show, guests, and the party at Pure! All of these photos are now online at <http://hostingcon.fastservers.net>.

The entire team at FastServers.Net would like to thank everyone who attended both HostingCon 2006 and the after party at Pure. We look forward to seeing you at another exciting event at next year's HostingCon 2007.

New Staff

The FastServers.Net team is growing! Three new employees have either been promoted or have recently joined the team. Let's get right to the introductions:

Drew Hulbert – Mr. Hulbert has moved from our technical support department to our elite team of sales engineers. Drew's new position as sales engineer allows our entire sales team to remain "solution" focused

with a heavy emphasis on the technology we offer at FastServers.Net. But don't take our word for it, call us today and ask for Drew Hulbert, he'll be happy to answer all your questions.

Mark Luptak – Mr. Luptak will be leading our outside sales team based in Chicago. Mark's primary responsibilities will be to focus on new enterprise level customers and to develop new partnerships that help FastServers.Net enhance our products and services.

Greg Kuiper – Mr. Kuiper has joined our technical support team in Chicago as a dedicated server engineer. Greg's extensive experience in the web hosting industry will provide an even greater experience to our dedicated server customers. Next time you need the right answers to a question or issue regarding your dedicated server, Greg may be the one behind the scenes taking care of you every step of the way.

Want to work for the leader in dedicated server hosting? FastServers.Net is expanding and would like to review your resume. Positions are opening up throughout the organization. Send your resume to hr@fastservers.net. We look forward to hearing from you.

New PENTAGON.FASTSERVERS.NET Interface

The time has finally arrived. After six months of development from our team of hard working engineers, we are getting ready to launch a brand new dedicated server control panel at pentagon.fastservers.net. The FastServers.Net team of engineers added a series of new features and functionality to the control panel. Once released, the control panel will make it much easier for customers to submit helpdesk tickets, review server information, and manage their billing information all from one simple application. The estimated release date will be on or before August 15th.

ISPCON 2006 – Santa Clara, California

ISPCON 2006 will be held in Santa Clara, California, November 7, 8 and 9 in the Santa Clara Convention Center. FastServers.Net will be there in conjunction with WebHosting Automation, the developers of the Windows control panel software, HELM, to showcase the product and its achievements in the hosting industry. Partnering with WebHost Automation will allow us to focus on

enhancing FastServer.Net's suite of products and services for the ultimate experience in dedicated server hosting.

To learn more about HELM, visit www.webhostautomation.com.

To learn more about ISPCON visit www.ispcon.com.

Midwest Data Center Tour – Now Online and Available on DVD

FastServers.Net now has a full-featured data center tour available online and on DVD. This production took over 50 hours to produce and is packed with important information about our data center. This video is a must-see for everyone!

To view the data center tour online, visit the following web page:

<http://www.fastservers.net/network-data-center/dc-tour.html>

To get a free DVD of the data center tour, please email your address and contact information to sales@fastservers.net.

Private Label Data Center Tour

The marketing team is also considering a private label production of the data center tour for customers to use as part of their own marketing materials. If your organization is interested in participating in the FastServers.Net private label program, please send an email to Aaron Phillips, Vice President of Sales and Marketing – ap@fastservers.net.

Newsletter Format

Get ready for a new and improved version of the FastServers.Net newsletter. In the next two months we will be launching a larger format of our newsletter. The new format will include more exciting content about what's going on at FastServers.Net. Also included will be color pictures and a flexible layout giving us the opportunity to provide the information you need in order to get the most out of FastServers.Net, our products and services, and the team behind the scenes.

If you have ideas or suggestions on how we can improve our newsletter or if you would like us to write about your company, your experience with FastServers.Net, specific product reviews, or any newsworthy items, please email Aaron Phillips at ap@fastservers.net.
