

FastServers.Net Opens Third Data Center In Chicago, IL

Chicago, IL (PRWEB) January 18, 2007 – FastServers.Net Inc., the fastest growing, award winning, fully managed dedicated service provider, has selected Switch and Data's Chicago data center for its expansion and continued growth. Switch and Data, a leading provider of Internet exchange and colocation services, will provide FastServers.Net with up to 15,000 sq ft of space, redundant power and multiple interconnection services. FastServers.Net will continue to provide its full range of services in the new facility – from customized single server solutions to enhanced Enterprise-level cluster based solutions.

FastServers.Net initially started expanding in to the Chicago area with the establishment of their Chicago Headquarters in May 2005. With the tremendous growth experienced by FastServers.Net in 2006, the Switch and Data facility was selected to provide significant room for continued expansion and to provide direct access to multiple carriers. The new data center facility is located on 427 South La Salle Street, less than one mile from the W. Jackson Blvd Chicago Headquarters.

“Switch and Data's Chicago data center provides FastServers.Net the opportunity to quickly expand our offerings in the growing dedicated server and colocation market. Switch and Data's reliable colocation services and multiple access points to top tier bandwidth providers in one facility, has made it extremely easy for us to expand into this data center. We are ecstatic about this opportunity and will continue to build our infrastructure to accommodate the needs of our customers,” said Aaron Phillips, Vice President of Sales and Marketing at FastServers.Net.

FastServers.Net is currently working towards final preparations at the new data center. Preparations include testing network connectivity, increasing staff, implementing resources, and preparing the new space for high-quality delivery of FastServers.Net colocation and managed dedicated hosting services. Availability of services is expected to launch in the first week of February. FastServers.Net will also continue offering services in the Cedar Falls, Iowa and Fremont, California data centers.

About Switch and Data

Switch and Data is a leading provider of Internet exchange and colocation services. Based in Tampa, Florida, Switch and Data operates one of the largest footprints of neutral Internet exchange and colocation facilities in North America with 34 data centers in 23 markets serving more than 830 customers. Switch and Data's PAIX is recognized worldwide as the premier name in peering and Internet exchange services and is home to one of the largest commercial exchange points in North America.
