

FastServers.Net Beats Out The Competition, Wins Web Host Award

HostReview.Com Awards FastServers.Net Top 10 Best Managed Hosting Service

Chicago, IL (PRWEB) January 22, 2007 – FastServers.Net Inc., the fastest growing, award winning, fully managed dedicated service provider, is awarded “Top 10 Best Managed Hosting Service of 2006” by HostReview.Com. FastServers.Net has consistently ranked in the top three positions at HostReview.Com for their ability to provide the “best of breed” services in dedicated managed server hosting, beating competitors ThePlanet, RackSpace, and DataPipe.

“We are not surprised that we won the 2006 award for best managed hosting service from HostReview.Com. Our ten years experience in providing hosting solutions enables us to deliver the highest quality in services to our customers. Even our monthly rankings on HostReview.Com, placing us in the top three positions consecutively, proves the validity of our services and our ability to beat out the competition consistently,” said Aaron Phillips, Vice President of Marketing at FastServers.Net.

FastServers.Net also placed in the Top 25 Web Host category by TopHost.Com for 41 consecutive weeks in a row. As the managed dedicated hosting company continues to climb the charts on TopHost.Com, currently ranked 12th in the Top 25, competitors will have to restructure their approach in the marketplace in order to keep up with the fast-growing provider. FastServers.Net also achieved a score of 93 and earned a top spot in the Web Host Magazine Buyer’s Guide, placing them in the top four highest rankings, according to the magazine’s reviewers.

As a result of these numerous awards and notable spotlights, FastServers.Net has experienced significant growth, including the addition of a third data center, located in Chicago, Illinois. The new data center will provide FastServers.Net with up to 15,000 sq ft of space, redundant power and multiple interconnection services, giving the managed dedicated server provider enough space and power to continue its excellence in customer satisfaction and overall quality of service.

Aaron also stated, “A tremendous amount of our success is due to the team we have in place, our partnerships with well-known vendors such as Dell, and our ability to communicate with customers to understand their goals and requirements. The awards we have won and the recognition we receive in the industry play an important role in how we continue to build our company. We recognize the importance of delivering a solid product, backed by solid services. FastServers.Net is built on those principles and will continue to utilize that philosophy.”
