

## Introducing ModernBill and Cortex

The elite choice in billing software and gaming control panels delivers a lethal combination for the game hosting market. ModernBill provides all the essentials for complete automation in billing game servers. And with the integration of a Cortex module, game servers can be provisioned instantly.

### A Total Solution

Billing and game management, all built into one seamless, easy-to-use interface.

ModernBill and Cortex give you everything you need to run your game hosting company including:

- Game management
- Network management
- User Management
- Server Management

ModernBill and Cortex, completely integrated and ready to advance your game hosting business to the next level.

### The Cortex Module

Integrated into the ModernBill engine is the Cortex module. With fewer configuration settings required, the Cortex module can be setup within minutes allowing game hosters the ability to get their products to market quicker and faster than the competition.

### Game Provisioning

The most popular games are available in Cortex.

Now you can provision games such as:

- Counter-Strike
- Half Life 2
- Halo
- Battlefield
- Call of Duty

Provisioning can be automated freeing up your time to play more games instead of managing your customer's game servers.

### Full Account Control

ModernBill and Cortex utilize technology that provides full account control. From the billing system interface, administrators can create, delete, suspend, and unsuspend accounts accordingly.

You can run your system manually or take full advantage of the automation pieces of ModernBill.

### Multiple Billing Cycles

Provide multiple billing cycles to your customers. Bill them daily, weekly, monthly. You can even bill them hourly. Take control over your billing by utilizing the flexibility of ModernBill's core engine.

### Multiple Administrators

Create as many administrators as you want to run your game server hosting business.

The system is designed to give you full control on your administrators. And you can allow or deny certain features according to your own set of business rules.

### Control Number of Players

As a game hosting provider you may want to control the number of players allowed on a specific server plan. ModernBill and Cortex provides a user-friendly interface to manage the number of players per server plan.

### Server Load Balancing

You can set your system to provision to servers based on their load balance. This automated process provisions servers according to how you want each server to be setup.

Full load balancing customized to your specific needs allows you to run your business more efficiently.

***Don't go into battle alone!***

Team up with ModernBill and Cortex.
